TITLE : IMAGE PROCESSING SYSTEM

ABSTRACT : PURPOSE: To provide the image processing system which can output image data after the optimum resolution converting process of a printer by determining an optimum converting method for the image data and performing conversion fast on a host computer.

CONSTITUTION: In the image processing system wherein the host computer 200 and printer 100 are connected, a resolution conversion part 218 in the host computer 200 selects the optimum converting method on the basis of respective characteristic data of the printer 100 that are received by a printer control part 219, and the image data stored in an image data storage part 202 in a RAM 215 are converted and then transmitted to the printer 100.
